Automation Engineer and Full Stack Developer skilled in React, Flask, SQLAlchemy, Selenium/Playwright, and CI/CD workflows. Experienced in building scalable APIs, dynamic UIs, and reliable automated test suites across gameplay, VR, and web projects.

TECHNICAL SKILLS

Languages: JavaScript, HTML5, CSS3, Python, C++, C#, SQL

Frameworks & Libraries: React, Node.js, Flask, Bootstrap, SQLAlchemy

Testing & QA: Manual Testing, Test-Driven Development, API Testing, Regression Testing, Test Data Management, Selenium, Playwright, pytest, Postman, CI/CD Pipelines

Tools & Platforms: Git, GitHub, GitHub Actions, Azure DevOps, Trello, Jira, VS Code, Rider, Blender, Claude AI

Development Areas: RESTful APIs, OOP, Agile Development, Web Security Awareness

Game Engines / VR & Other Tools: Unreal Engine 4/5, Unity (Blueprints & C++), Performance Optimization, 3Ds Max, Fusion 360, Adobe Suite

EXPERIENCE

Automation Engineer

Jul 2025 – Present

Arrive Logistics

Austin, TX

- Built and maintained automated testing solutions using Selenium, Playwright, and pytest to ensure the quality and reliability of logistics software systems
- Wrote and refined test cases, integrating automated test processes into CI/CD pipelines (GitHub Actions, Azure DevOps) with cross-functional teams
- Enhanced test coverage and identified bugs early through API testing with Postman, supporting fast-paced delivery of logistics technology
- Partnered with developers to embed quality checks earlier in the development lifecycle, reducing regressions reaching production

Coding Temple Apprentice

Feb 2025 – Jun 2025

Coding Temple

Remote

- Built 9+ end-to-end web applications through hands-on, project-driven development using Flask, React.js, SQL, and RESTful APIs
- Exceeded project expectations by implementing advanced frontend logic and optimizing backend processes while maintaining clean, testable code and on-time delivery

Game Developer

Nov 2024 – May 2025

Bitmask Games

Rhode Island

- Designed and implemented core gameplay systems using Unity and NES Maker, contributing to the timely delivery of commercial retro gaming projects
- Reduced in-game bugs by 30% through rigorous QA testing and performance profiling

Game QA Tester (Contract)

Nov 2024 – Jul 2025

DAQA

Remote

- Provided QA testing services for AAA and indie titles, identifying and reporting over 200 bugs across multiple platforms

Project Lead / Technical Designer

Jan 2024 – Present

Redmist

Kajaani, Finland (Remote)

- Led the design and technical development of BloodDrunk, a high-speed VR shooter, from concept to working prototype using Unreal Engine 5 and Blueprints
- Managed a remote, interdisciplinary team via Trello and Discord, improving sprint efficiency and project delivery by 20%
- Engineered immersive AI behavior and modular level design, enabling replayability and high user engagement in VR environments

PROJECTS

Mechanic Shop Database API | *Flask, SQLAlchemy, Marshmallow*

- Built a scalable RESTful API for a mechanic shop, implementing CRUD functionality, modular blueprints, and many-to-many ticket assignments, streamlining task tracking and technician assignment workflows
- Integrated token-based authentication (python-jose), rate limiting (Flask-Limiter), and caching (Flask-Caching), enhancing data protection, reducing server load, and improving response speed

FakeStore E-commerce Web App | *React, React Router, Axios*

- Built a dynamic, mobile-responsive eCommerce site using React Router and Axios, enabling seamless product browsing, filtering, and admin-level CRUD control
- Created modular, reusable UI components with props and state management, and integrated real-time API interaction for live product-data editing

EDUCATION

Coding Temple

Feb 2025 – May 2025

Certificate, Software Engineering

University of Staffordshire

2021 – 2024

B.S. Computer Games Design, First Class Honours (4.0 GPA)

Stoke-on-Trent, UK
